

WAP User Interface - It's All in Your Hands

Electronics Line 3000's **WAP User Interface** offers users the proven flexibility of on-line remote management, at the palm of their hands. Developed to offer complete functionality on-the-go, the new WAP interface allows users to enjoy comprehensive remote management features through their mobile phones, for convenient, interactive system control anywhere and anytime.

The WAP User Interface, available with **iConnect** and **infinite Prime Broadband** utilizes the **Electronics Line Application Server (ELAS)** to offer users a new ability to control their systems via a dedicated and intuitive to use mobile application.

Dedicated Application Server

The ELAS offers interactive Web and WAP User Interfaces for complete remote system control by end-users. Remote management features include activating the system and home automation functionalities, defining user codes, conducting status checks, defining alerts settings and destinations, as well as viewing, saving and printing event logs and more.

WAP User Interface

With the WAP User Interface users enjoy complete functionality on the go while providers benefit from an additional revenue stream and may brand the interface with their logo, enhancing their brand and service offering.

- **Remote System Activation** - Easy and convenient system activation allowing users to arm and disarm the system wherever they are.
- **Users and Codes** - System users and user codes may be easily added, edited or deleted.
- **Alerts** - Alerts settings and destinations can be simply defined. Users may configure SMS and email event notifications which are sent from the ELAS.
- **History** - Event logs can be easily viewed.
- **Remote Home Automation** - Users can activate appliances and devices from anywhere, and may schedule the activation of appliances according to specific parameters or scenario responses.
