

CommPact Wins the 2010 Detektor International Innovative Achievement Award

Petach Tikvah, Israel (September 26, 2010) – Electronics Line 3000 Ltd. (Prime Standard: ELN), a leading global provider of residential security with remote management, is proud to announce that its latest solution, CommPact has been awarded the Innovative Achievement Award in the 2010 edition of the prestigious Detektor International Awards in the Alarm and Detection category.

CommPact, Electronics Line 3000's latest wireless residential security and control solution was launched at this year's Ifsec to great enthusiasm from the market. This unique solution, available with GPRS and/or PSTN communication modules, encompasses all essential residential security functionalities, with the added bonus of extra small packaging, simple wireless installation and advanced remote management capabilities based on GPRS. The solution provides uncompromised reliability and advanced functionality, and offers users intuitive operations as well as easy upgrades and monitoring for providers.

CommPact allows users to be always up to date and in control of their system by receiving SMS and email notifications, and sending SMS commands and requests for updates. Moreover, CommPact GPRS incorporates a dedicated Web user interface for interactive, on-line system control, video look-in, system settings control and more. The solution also includes a dedicated WAP user interface offering the same on-line remote management features as the Web user interface for users to enjoy through their mobile handsets.

Providers benefit from CommPact's comprehensive suite of management applications and diagnostic tools, offering real-time monitoring en masse, mass remote management, maintenance and status check as well as on and off site configuration and remote firmware updates.

The Detektor International awards are the only internationally established security industry prize where suppliers can not nominate their products; rather, an editorial committee nominates entrants from products released over the previous 12 months, based on aspects of technical developments, sophisticated packaging qualities and overall innovation.

The judging panel concluded that: "This wireless all-in-one-box security solution proves that many useful features and advanced remote management capabilities can be made for the mass market."
